

Maximiliano Hernandez Castillo

Greetings.

I'm Max Hernandez, a software engineer with approximately three years of professional experience. I've worked with Python backend scripts, NodeJS frontend applications, and a few app designs incorporating graphic design fundamentals with mainly open source tools.

I am very confident working with Django to construct backend APIs. I've primarily written RESTful APIs, worked with MySQL and PostgreSQL relational databases, and have some experience with related solutions like setting push notifications, adding cache using Redis or building asynchronous tasks.

I've spent the last few years focusing on building frontend applications with React. I have configured projects from scratch with Webpack and Rollup. I've created websites, single-page applications, and NodeJS packages. I believe I am adept in HTML5, CSS, and vanilla Javascript. I also have good experience with Linux systems, configuration, and bash scripting. I have basic understanding of graphic design. I have some experience designing frontend apps with Inkscape, Gimp, and Figma. I also have experience working in Agile environments.

Thank you for your attention and time. I'm looking forward to learn more about the position, and I would welcome the chance to provide insight into my knowledge and experience.

Best regards.
